How infection spreads

Infection is spread by people how cough and touch an object or touch you, and you touch the object and then touch your eye, mouth, ears, or food

How to avoid infection

To avoid infection you must wash your whole hand including under rings a between fingers. Then you must dry your hands so the bacteria have no were to live. Last you must stay clean by using a cloth to turn off the water and open the door.

Comment

This response is minimally acceptable. The layout lacks balance and titles and headings are weak. Many important details are missing; however, the student attempts to address the task. The overall response lacks organization.

KEEPING THE VIRUS AWAY

door handls and taps

Comment

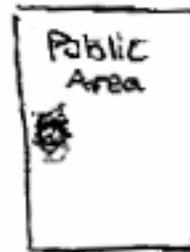

This is a competent response. The visuals are appropriate, but the layout lacks balance. There are acceptable titles and heading, and appropriate details are included.

HOW TO AVOID COLDS AND FLU

Wash hands with soap and running water
for at least 15-30 seconds

Viruses can live up to an hour on a door knob, so be sure to wash after being in public areas.

Dry your hands well
because damp hands give bacteria an ideal environment

Colds and flus are generally passed on when someone blows their nose or coughs into their hands and comes in contact with you or something you touch.

Comment

This visual design attempts balance; however, the details are redundant. There are gaps and weaknesses in the overall product; however, it is generally appropriate for content, audience and purpose.

How To Prevent
The Cold and Flu

cold and flu are passed when someone coughs or sneezes and shakes hand or touches objects

viruses live an hour on
surfaces such as doorknobs

thoroughly
wash hands ^ for
15-30 seconds

Dry your hands
Thoroughly because
air drying
promotes bacteria

Cold Germ and

SICK?

box of
kl eenex

The most helpful way to avoid sickness is to wash your hands!

- Wash hands using soap and warm running water
- Be sure to wash the back of your hands, between fingers and finger nails
- Completely dry your hands! Viruses attract to moist surfaces
- Viruses can live on a surface for approximately one hour
- In public washrooms, turn off taps and open doors using paper towel

STAY CLEAN, STAY HEALTHY

This very good response demonstrates an understanding of context, audience and purpose. The visual design is accurate and includes most significant details. Appropriate titles and headings are evident as are some visual effects.

How to Avoid Cold & Flu.

Dr. Johnson said...

ALWAYS WASH YOUR HAND

- Wash your hand with soap and running water For at least 15 to 30 seconds.

This removes 99% of bacteria.

- Don't forget wash the backs of your hands, Between your fingers, around the nails, and under your rings
- Dry your hands thoroughly.

If you don't, you may increase the number of pathogens on your skin.

- In public washroom after washing your hands, use a paper towel to turn off the tap and to open the washroom door.

HOW TO STAY HEALTHY

and free of the flu

DONT TOUCH

How to transfer a virus-

- by sneezing, coughing or blowing your nose, and transferring it to another surface before washing your hands

How to catch a virus-

- by touching your eyes, nose or mouth after your hands come in contact with a potential virus

Remember:

Remember:

Viruses can live up to an hour after they are transferred, always wash your hands for at least 15-30 seconds with antibacterial soap and warm water to get a good clean. make sure you wash your palms, back of hands, fingers, and remove rings. Always thoroughly dry because damp is an ideal environment for bacteria.

Remember:

Use a paper towel in public restrooms to turn off the tap, and open the door.
